CSC 360, Quiz 4 Practice

1. What is Apache Maven?
2. If we are using Junit, where does this get specified in the POM file (e.g., what *tag* does this fall under)?
3. What are the 3 main lifecycles in Apache Maven, and what do they do?
4. In Junit, what do @BeforeEach and @BeforeAll do?
5. Generate appropriate tests for the method below, making sure to include edge cases. Note that the method may not pass all tests as written.

countVowels

```
public static int countVowels(String s)
```

Counts the number of vowels in the string

Parameters:

s - the string to count vowels in

Returns:

the number of vowels in the string

6. For the code below, create a test using @CsvSource to generate 100% coverage. What is the cyclomatic complexity of the code?

```
public static String myMethod(boolean a, boolean b) {
        if (a) {
            if (b) {
                return "AB";
            }
            return "A";
        } else if (b) {
            return "B";
        }
        return "NONE";
    }
```
